PROFESSIONAL SUMMARY

Full-stack engineer with a focus on product and infrastructure. Co-founder and Tech-lead of a live quick-commerce platform in Italy, creator of fun-error (1000+ npm downloads), mentor to 100+ developers.

EDUCATION

Bachelor of Technology (Artificial intelligence)	2024 - 2028
Newton School of Technology, Rishihood University	Grade: 7.4/10.0
Intermediate (Class XII)	2023 - 2024
Genius Pu College	Grade: 67.0%
Matriculation (Class X)	2021 - 2022
Delhi Public School Mysore	Grade: 82.2%

INTERNSHIPS

Founding Engineer ORGÉA	January 2026 - March 2026 <i>Italy · Remote</i>
-----------------------------------	--

- Own end-to-end system architecture and production infrastructure-designing and shipping scalable, production-grade systems from scratch.
- Re-architected the data layer for GDPR compliance, establishing robust data models, fine-grained access control, and complete lifecycle management in live production environments.
- Leverage AI as a force multiplier to accelerate development and automation, while optimizing performance through intelligent caching, query optimization, and efficient data pipelines.

Python Instructor and Curriculum Designer GamutX	August 2025 - September 2025 <i>Remote</i>
--	---

- Designed and delivered a comprehensive Python curriculum covering core programming concepts, data structures, and algorithms, creating structured lesson plans and hands-on coding exercises to help learners build strong foundational skills.
- Simplified complex programming topics into industry-relevant, easy-to-grasp modules that improved student comprehension and learning outcomes, enabling learners to transition smoothly into practical development work

PROJECTS

Wraft (Github)	April 2026
---	------------

- Built a low-latency AI automation system that compiles structured business data into retrieval-ready embeddings and executes context-aware WhatsApp/web agents via a custom RAG pipeline, with Postgres-enforced feature gating and deterministic quota resolution under concurrent workloads.
- Implemented WhatsApp Business API orchestration with streaming LLM responses, function-triggered actions, and Redis-backed idempotency (24h TTL) to deduplicate retries, combined with PostgREST inner joins to resolve profile→plan→limits and analytics relations in a single network round trip.
- Shipped on Next.js 16 + React 19 Compiler with TanStack Query-driven cache hydration, zero-CLS streaming UI, hardware-accelerated blur layers, and real-time usage telemetry synced against backend quotas.

Vendor Dashboard — ORGÉA (Demo)	January 2026
--	--------------

- Engineered a high-performance data sync layer using TanStack Query with optimistic updates, deep cache merging for nested product structures, and Postgres-level low-stock triggers ensuring data integrity regardless of update source.
- Implemented aggressive client-side image compression(WebP, 200KB, Web Worker-based) with atomic API routes that auto-rollback on partial failures,and PostgREST inner joins to resolve product-pricing-inventory relationships in a single round trip.
- Built with Next.js 16, React 19 Compiler, and Cloudflare Workers, with Shaden UI, Framer Motion micro-animations, and zero-CLS skeleton screens — deployed and live at vendors.orgea.shop.

SKILLS

Computer Languages: Python, TypeScript

Data Tools: NumPy

Software Packages: React, Redux, Pandas, Next.js, Express JS, MySQL, MongoDB

Others: GenAI, Zustand

EXTRA-CURRICULAR ACTIVITIES

- Trained 100+ peers in-depth in Web Development, enabling many to achieve top 10 rankings in competitive coding assessments.
